Roof Glazing Systems

Quality Assurance Policy

Our company objective is to strive for 100% customer satisfaction in the products and services that we supply. In order to achieve this aim we have set up the following policy which is implemented at all levels of our business activities.

Clear Amber is committed at all levels to ensure that:-

- Products supplied to our customers can be traced back to their source.

- At every stage from taking an order through to its final despatch, documentation shall include dates, times and operative's names who were involved.

- Staff involved at every level of order processing are rewarded according to 100% customer satisfaction.

- All errors shall be rectified promptly to the customer's satisfaction excepting consequential loss and as in our Terms & Conditions which are available upon request.

- Where an error has occurred, processes or products are reviewed to eliminate any possibility of further errors occurring.

- All quality records and systems are regularly reviewed in the light of performance in order to achieve our company objective.

Environmental Policy

Our Company objective is to ensure that our products and services do not impact or affect the environmental in any harmful way that can be avoided. In addition to this any unavoidable activity is monitored to ensure that it is minimised. In order to achieve this, the following Policy has been established.

Clear Amber is committed at all levels to ensure that:-

- Any risk of pollution arising from our activities, products or services is identified and then either eliminated or effectively controlled to meet or exceed all regulatory requirements relating to the environment.

- All unnecessary use of materials resources and energy or adverse effects caused as a result of our activities, are minimised, adopting the principle of BATNEEC (Best available techniques not entailing excessive costs).

- Waste is managed, recycled as far as practicably possible and reduced to a minimum.

- Employees are trained on the importance and implementation of our Environmental Policy.

- Sub-contractors are made aware and agree to comply with this policy.

- Suppliers provide an environmentally friendly solution for all products and services provided by them.

- We regularly review this policy in the light of knowledge and changing legislation or public concerns.

ALU**KAP**®-XR

ALUKAP-XR : 45mm Bar

This neat 45mm Alukap-XR glazing bar is an excellent solution to compliment 45mm timber rafters. Despite its petite nature, it offers surprisingly substantial sight lines providing impressive aesthetics to the glazing structure. The secret-fix security aluminium end cap system prevents the top section from slippage and many clients say that they have even used to prevent the glazing itself from slipping down moderately sloped roofs. Users must carry out their own tests on the site specific loadings to satisfy themselves that this structurally acceptable for each particular application.

ALU**KAP**®-XR

ALUKAP-XR : 60mm Bar

The 60mm Alukap-XR glazing bar has been developed to cope with situations where a wider cover is required. Its shape compliments the 45mm Alukap-XR bar so that both can be used on the one structure if desired. Both bars lend themselves excellently to a perfect inline joint connection without extra components allowing a far higher yield on optimisation of bar lengths which underscores one of the key the design concepts of reducing waste and cutting costs.

ALUKAP®-XR

Common Uses
- Roof Lights
- Orangeries
- Conservatories
- Car Ports
- Canopies
- Covered Walkways

Benefits
- Faster System to Fit
- Improved Aesthetics
- Superior Water Proofing
- More Installer Friendly
- No Plastic Connectoins
- Concealed Fixings

ALUKAP-XR : 45mm Wall Bar

The Alukap-XR Wall Bar offers the ultimate waterproofing solution in circumstances where a glazing structure terminates at a rising wall. Again the second-fix top section allows all the hard work to be done first before simply snapping the upper profile in place. This system eliminates much of what would otherwise be a complex lead detail.

ALUKAP-XR : Hip Bar

This Alukap-XR Hip Bar is a must-have for easy hip connections. It provides a second-fix cover member, allowing the installer to make accurate mitre abutments and apply sealant if necessary, before snapping on the upper profile that acts as an umbrella protection without any unsightly and impractical plastic connectors.

ALU**KAP**®-**XR**

ALUKAP-XR : Ridge Bar

The ridge area of a roof gets the greatest impact from the elements, which is why the Alukap-XR Ridge Bar is manufactured with and incredibly robust structure. Curved gasket feet that acomodate varying pitches, and a generous overhang that again protects the connections from adjoining bars without any unsightly and impractical plastic connectors, are just two of the many outstanding features and benefits to this unique ridge system.

ALU**KAP**®-XR

ALUKAP-XR : Endstop Bar

Issues with the lower end of glass and polycarbonate glazing panels gave rise to the innovation of a substantial drip trim that will not warp, discolour, crack or fall off like the inferior plastic equivalents. This crucial area is all too often left to chance, and can cause costly damage to the glazing. The Alukap End Stop, puts a stop to that!

...SIMPLE
SELF-SUPPORT
ROOF GLAZING
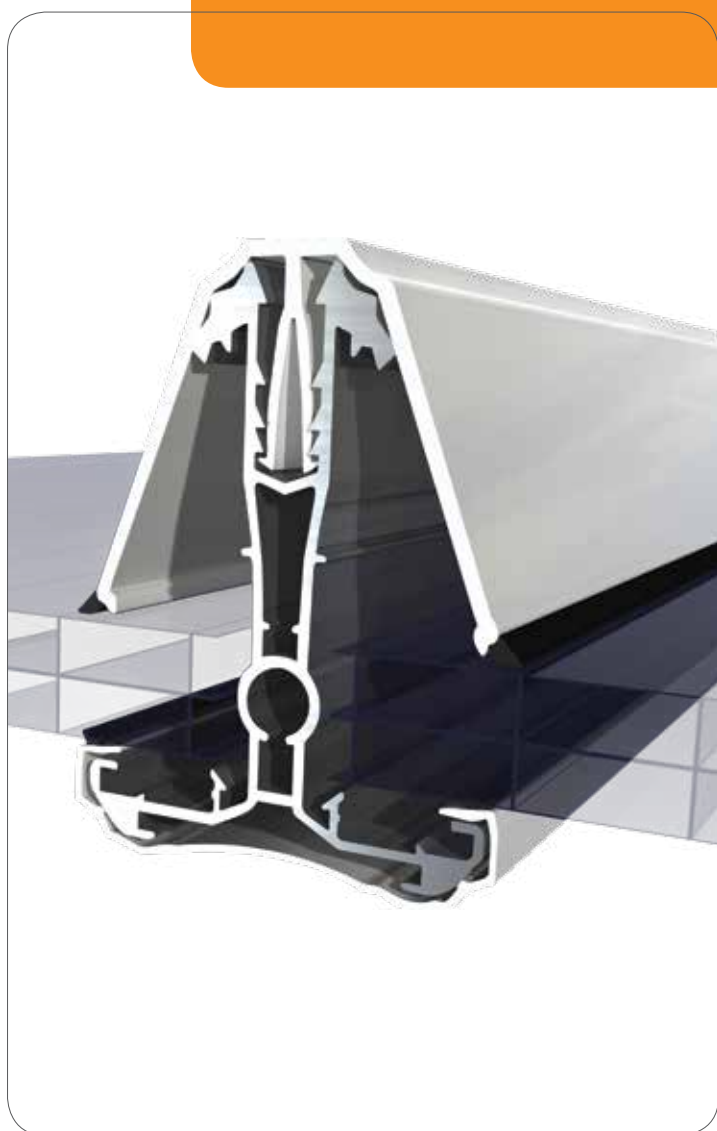

SUPERSPAN®

SUPERSPAN®

This unique lean-to self-support system is designed to combine exceptional strength ratios with an excellent aesthetically pleasing finish. Superspan's simplicity reduces installation time without reducing the quality of the finished product. Superspan bars are suitable for spans of up to 4000mm in most applications. Greater spans can be achieved by using a bolster bar kit or more commonly by the customer creating an intermediate purlin support.

Pitch variation 2.5 to 15 degrees.
Roof bars tested to load 0.6Kn/m2

COLOUR COATING

The latest colour coating technology means that Superspan can be coloured to any RAL or BS colour code.   Extra lead times and costs apply.
Inasmuch as the suppliers have no control over the circumstances in which our material may be used, we cannot guarantee that any particular results will be achieved. Users should carry out their own tests to determine the suitability of the material for their application. Installers should satisfy themselves that published permissible loadings and bar spacings for Superspan roofs are sufficient to provide adequate strength for the intended use and to meet regional loading requirements.

PERMANENTLY
BONDING
TAPES

SECURBOND®

Common Uses
• Fixing Georgian Bars
• Fixing Facings and Architraves
• Overglazing Windows with Polycarbonate
• Mounting Mirrors
• Mounting Signs
• Bonding Plastic Sheets to Frames and Walls

Benefits
• Each Roll Individually Bagged
• Instant Cure Bond
• Closed Cell Zero Water Absorbtion
• Very High Bond Adhesive
• Superior Release Liner for Quick Removal

SECURBOND®

This range of premium quality, double-sided dry glazing tape is recommended for permanently bonding all trims including georgian bars, facings and architraves. Its immediate high tack means that no unsightly fixings are needed in most situations, and you don't need to wait for messy silicone to cure.

In addition, it is so powerful that it is commonly used to stick mirrors and other glazing to walls and frame work. It is ideal for vandal-prone areas where drilling and mechanical fixings can reduce the impact strength of the panel. The combination of high quality materials used in its manufacture ensure maximum resistance to ageing, UV radiation and plasticizers.

Securbond®-M Trim and Mirror Tape (Can be sold in single rolls)

Common Uses
- Weather Strip
- Glass Cushion Gasket
- Single Sided Dry Glazing
- Draught Excluder

Benefits
- Drum Style Coil Dispenser
- Integral Anti-Stretch Netting
- Superior Weatherability
- Ribbed Glazing Surface for Better Seal
- Instant Cure Bond Adhesive

SECURBOND®

Securbond-Dry is well established for use in high quality, single sided, dry glazing applications, and offers superior cushioning and weatherability. The 'drum' style rolls assist easy dispensing and storage, and allows shorter lengths to be pulled off for your customers as desired.

Securbond®-DRY (Can be sold in single rolls)

| Code	Description

ATMOS**VENT**®

Atmosvent® roof vents are made-to-measure to suit nearly all rafter spacing requirements. Atmosvent roof vents provide an ideal ventilation solution and can also help to reduce heat gain. The AtmosVENT® Aluminium range offers long term durability in the most extreme environments, and is available in four thicknesses to suit nearly all glazing requirements. Atmosvents are supplied unglazed for customers to fit their preferred glazing sheet option. Please allow 6 working days for delivery.

Notes

National Seal Systems Limited

Column 1

1. Cut the Alukap®-XR base bar to the desired length.

2. Cut the two rubber gaskets to length to suit the same length as the Alukap®-XR base bar and insert them carefully in to the gasket location grooves.

3. Position the Alukap®-XR rafter gasket over the timber rafters and lay the glazing materials on top, allowing enough space in between for the fixing screws and thermal expansion appropriate to the chosen glazing material.

4. Lay the cut-size Alukap®-XR base bar directly above the rafter, on top of the glazing materials and drill pilot holes through the pre-drilled holes in the Alukap®-XR base bar, in to the rafter as required. Then screw the Alukap®-XR base bar in to place, taking care not to over-tighten the screws, but making sure that the gasket are creating a uniform seal with the glazing material.

5. Screw the Alukap®-XR end cap on to the Alukap®-XR base bar.

6. Make any additional seals with a suitable sealant as required, where the Alukap®-XR base bar makes any abutments or connections to walls, hip bars or ridge bars.

7. Now carefully cut the Alukap®-XR top cap bar to the accurate length required including any mitre or angled cuts for a perfect aesthetically pleasing finish. Snap the Alukap®-XR top cap bar on to the Alukap®-XR base bar along the whole length. use a suitable rubber /plastic headed hammer for this action and avoid heavy impact, to avoid damage to the Alukap®-XR bar and the glazing materials.

Column 2

1. Follow the same instructions as the standard bars (see left) but note the following additional points

2. Where glass is chosen for the glazing material rather than Axiome, the Alukap®-XR wall and gable finishing bars require a timber packer piece under the outer edge gasket. Where Axiome is used, the glazing material can be extended right the way across the rafter under the outermost Alukap®-XR glazing bar gasket.

3. Where applicable ensure that the timber packer piece is the same thickness as the glass glazing material

4. Make sure that the rafter gasket runs underneath the packer piece

5. In the case of the Alukap®-XR wall finishing bar, the ribbed backing of the up stand makes a perfect surface for a suitable sealant to create an abutment to the adjacent wall.

6. If required simply fit a flashing tape or lead to the adjacent wall and flash over the top of the Alukap®-XR wall finishing up stand.

Column 3

1. Follow the same instructions as the standard bars (see far left) but note the following additional points

2. The vertically raised side of the Alukap®-XR hip bar allows an excellent surface for other Alukap®-XR standard bars butting up from adjacent jack rafters to be mitred and sealed against

3. Once the base of the Alukap®-XR hip bar is secured and sealed itself, then the final sealing of any top capping abutments of standard Alukap®-XR bars can be made easily without the umbrella top capping of the Alukap®-XR hip bar being in the way.

4. Once the final sealing of the adjoining bars is complete and the Alukap®-XR hip bar end cap is fixed, then the Alukap®-XR hip bar top cap can be snapped into position providing cover over the abutments from the elements.

Column 4

1. Cut the Alukap®-XR ridge base bar to the desired length

2. Cut the two rubber gaskets to length to suit the same length as the Alukap®-XR ridge base bar and insert them carefully in to the gasket location grooves

3. Lay the cut-size Alukap®-XR ridge base bar directly above the ridge rafter, on top of the glazing materials and drill appropriate sized holes through the Alukap®-XR ridge base bar, in to the ridge rafter as required. First and last holes should be a maximum of 100mm from the ends and then at 300mm centres in between. Then screw the Alukap®-XR ridge base bar in to place, taking care not to over-tighten the screws, but making sure that the gasket are creating a uniform seal with the glazing material.

4. Screw the Alukap®-XR gable or radius end cap on to the Alukap®-XR ridge base bar through the top tongue of the end cap with the top tongue resting on top of the base ridge bar, in between the two vertical location channels.

5. Make any additional seals with a suitable sealant as required, where the Alukap®-XR ridge base bar makes any abutments or connections.

6. Next cut the top section of the Alukap®-XR ridge to the correct length. Where Crests & Finials are being used, BEFORE fitting this top section to the Alukap®-XR ridge base section, apply a bead of sealant down the middle of the top section of the Alukap®-XR ridge and then slide the Crests and Finials into this top section.

7. Offer up the Alukap®-XR ridge top section on top of the Alukap®-XR ridge base section making sure that it is the correct size, and lowering it so that the two opposite pairs of inner vertical location lugs engage. WARNING: As a security feature the Alukap®-XR ridge top section is designed to be fixed once and permanently; it will not be easy to remove once the final snap-fix is completed. Once you are ready for the final fix use a suitable rubber/plastic headed hammer to snap this top section down both sides so that the outer location lugs snap firmly together. It is vital that both these outer snap-fix engagements are fully made working all the way along the entire length of the ridge. Avoid heavy impact, to avoid damage to the Alukap®-XR ridge bar and the glazing materials. In exposed applications extra measures should be taken if required to fix top section with additional mechanical fixings as desired.

National Seal Systems Limited

Features and Benefits

✓ Hidden fixings for improved sealing and better aesthetics

✓ No unsightly and impractical plastic connectors required

✓ Aluminium / alloy end caps include security fix system

✓ Improved full cover provides new anti-leverage security protection

✓ Full cover caps provide better water-proofing and eliminate top-base connection line

✓ Total base-to-cap surface cover allows simple butt-joint connections reducing waste and costs

✓ Internationally Registered Design style offers fantastically pleasing and stylish sight lines

✓ Stainless screws provide self-drilling assistance and deeper driver bit connection

✓ Pre-lubricated gaskets aid natural expansion and contraction of glazing sheets

✓ Concealed gasket design protects gaskets from exposure to the elements and provides improved aesthetics
